

ABSTRACT

A catheter water barrier 10 having a waterproof barrier portion 12 having a pair of channels 16,18 and a relatively long tie down strip 14 which is disposed through the pair of channels 16, 18. The catheter water barrier 10 is worn by a user 17 having a catheter 15 and which provides a watertight seal against the user 17 to protect the region around the catheter from becoming wet.
